

Product & AI Intern Assignment

Embark Services Pvt. Ltd.

Function: Product & Technology

Duration: 1 Day (Approx. 3–5 Hours)

Submission Deadline: 2 days

Objective

At Embark, we build technology solutions that simplify and accelerate complex business processes across the Global Capability Center (GCC) ecosystem. As a Product & AI Intern, you'll be expected to think beyond implementation—understand business problems, leverage AI effectively, and rapidly translate ideas into working solutions.

This assignment is designed to understand **how you think, how you build and how you use AI to solve real-world problems.**

Problem Statement

Recruitment teams often spend significant time reviewing candidate profiles, evaluating fitment, coordinating hiring decisions, and managing repetitive manual tasks. **Your task is to design an AI-powered solution that improves any part of the recruitment lifecycle.**

You are free to identify the problem you wish to solve and define the scope of your solution. You may make reasonable assumptions wherever required.

Deliverables

Part 1 – Problem Understanding (Maximum 1 Slide)

Help us understand your thinking:

- What problem are you solving?
- Who are the users?
- Why is this an important problem?
- What outcome should your solution achieve?

Part 2 – Product Solution (Maximum 2 Slides)

Present your solution. Include:

- Product workflow
- Key features
- User journey
- Assumptions

- Expected impact

Part 3 – AI Approach (Maximum 1 Slide)

Explain:

- Which AI model(s) or tools did you choose?
- Why?
- How is AI being used in your solution?
- How would you improve the quality and reliability of AI responses?

Part 4 – Prototype

Build a lightweight prototype using any technology or AI platform of your choice. The prototype does **not** need to be production-ready.

We are more interested in your ability to validate an idea quickly than in polished UI or extensive code.

Part 5 – Reflection (Maximum 1 Slide)

Briefly share:

- Which AI tools did you use?
- How did AI help you?
- What was the biggest challenge?
- If given another week, what would you improve?

Submission Guidelines

Please submit:

- Presentation (Maximum **6 Slides**)
- Prototype Link
- GitHub Repository (Optional)
- Demo Video (Maximum **5 minutes**, optional)

A Few Notes

- Focus on solving the right problem before building the solution.
- Clearly communicate your assumptions.
- We encourage the use of AI tools during the assignment. If used, briefly mention where and how they contributed.
- We value originality, structured thinking, and practical execution over polished visuals.

We look forward to seeing your approach. Good luck!
